

# Brief Introduction

**Gladiator** (Battle for Azeroth - HF)

Requires 120 credits recharged into your UCS account

HF Gladiator is a fully-automated PvP movement script that works in any Arena or BattleGround. Combined with HF combat rotation, it can be used as a real AFK-Bot to farm Conquest Points or PvP Gear. Note that it is not designed to help you get a higher PvP rating, because the movement and positioning logic is developed for simple tasks to wither interact with enemies (DPS, Tank classes) or teammates (Healer classes), which is enough to win Arena matches at low MMR or farm BattleGrounds.

**AFK botting is a subject to high risk of various detections, including server heuristics and player reports. Do not risk your precious account, if you can't afford to lose it. BE WARNED AND STAY SAFE!!!**

## Basic Usage Guide

1. [Download the UCS map pack](#) and install it into UCS folder.

2. If you have Gladiator module enabled in UCS launcher, then you should see a new Menu option called "Auto Move".

3. You can also combine it with "Auto queue" and select the instance type to automatically queue, enter and leave BG, Arena or Skirmish.

4. For better AFK experience, we suggest enabling all the possible combat rotation automation options (Burst, Defensives etc.) and set them to higher values.

5. Start HF Combat Rotation as usual by either clicking the minimap icon or /hf run
