

Brief Introduction

GPS (BfA - KFM)

Document Update: 04-Apr-2020

**AFK botting is subject to high risk of various detections, including server heuristics and player reports. Do not risk your precious account that is not affordable to lose.
BE WARNED AND STAY SAFE!!!**

KFM GPS is a next-gen framework to provide fully-automated movement solutions. It offers a comprehensive tool to design, develop and run proprietary projects. A project specifies how to move your character, engage enemies, loot objects, interact NPCs and world objects, and etc.

Basically GPS is an "AFK" enhanced version of many features in Pandora's Box. And when combined with other existing rotations that you have subscribed to, it automates nearly everything you can imagine in the game world.

Notice:

As GPS is just released, it is now in promotional period for BfA. So, the current subscription price is super discounted compared to the Classic version while the functions are exactly the same. Grab a subscription soon before the promotion ends!

Simplest steps for kickstarters:

1. Download the [map pack](#) and extract to the UCS root folder.
2. Create any folder to place your GPS projects.
3. Load GPS module and enter WoW.
4. Enter the root path of the GPS project folder on panel and then you are all good to go!

For more details as beginners, [read this manual](#) to begin your learning journey.
