

# Brief Introduction

**Pandora's Box** (BfA - PvE)

Document Update: 13-Jul-2019

This is a general rotation to offer non-class specific features, both combat and non-combat, for the comfort of your everyday WoW (BfA) life. It feels just like a magic tiny toolbox to enhance the quality and delight of your game experience in every way possible, including:

## Magic Casting

- Anti-AFK (purely passive without using keyboard)
- Dynamic Facing (360 degree spell casting)
- Talent Anywhere (change your talents anywhere)

## Magic Vision

YEAH! This is a smooth wallhack/ESP for WoW. It allows you to see and interact every in-game objects through obstacles, including players, npcs, world objects (including mines, herbs and chests) and spell objects!

## Magic Items

This section contains a pile of handy tools to automatically use trinkets and potions.

## Magic Interruption

This section provides a universal interruption/kicking tool that allows you to customize any spells and any targets for interruption.

## Magic Targeting

This section allows you to configure a specific policy to automatically select and switch targets without your constant monitoring and tabbing. It could be quite useful when it comes to targeting “Explosives”.

## Magic Professions

This section provides you a series of functions to automate profession activities, except that **you still need to do movement manually**.

- **Fishing**: a fish bot with built-in 30min CD for safety.
- **Looting**: loot the surrounding corpses.
- **Skinning**: skin the surrounding skinnable corpses.

## Magic Following

As the standard following function (/follow) has several drawbacks and limitations, there goes an enhanced auto-following system that can mobilize your character to always keep a certain distance with a certain unit.

*NOTICE: The movement only goes in direct path.*
